## The Primary Problems of Bus GPS Location & Distress Devices:

The problem with many competing vehicle tracking or Vehicle Location Systems is that they are tied to the vehicle video system, cell phone or 2-way radio system.

The first likely casualty of a vehicle hijacking or assault, would likely be the method the driver has at hand to communicate for help, so there goes the 2-way radio communication or cell phone and the ability of any GPS vehicle location, speed and heading information that might have been provided through the 2-way radio medium.

The second likely casualty will be the mobile video camera system and DVR as it is unlikely any perpetuating a nefarious and obscene violation of humanity would also not wish to be document doing so by possible live broadcast to the law enforcement community via wireless transmission. So there goes the video system, built in wireless communication and the ability of any GPS bus location, speed and heading information that might have been provided through the bus video system medium.

*“When taking measures to protect against the worst-case scenario of a hijacking, it would be wise to select a covert, stand alone system independent of the 3 most obvious means to transmit GPS and alerts.” ...NJC*

## The Primary Solutions For GPS Location & Distress Devices:

Covert systems are the most likely to be functional after those looking to disable such devices have made their search. Independent stand alone systems that are not tied to bus video systems, cell phone or the 2-way radio communication system, so that the information it can provide, can survive the most predictable efforts to disable or cut off the drivers ability to communicate using the bus 2-way radio or the bus video system that could have the ability to wireless stream location data to a central office.

## Sample Vehicle History Report

The screenshot shows a web browser window with the URL <http://venturegps.com/Reports.aspx>. The page title is "Reports". The browser's address bar shows "http://venturegps.com/Reports.aspx". The page content includes a navigation menu with "Map", "Reports", "Alerts", "Manage", and "Help". The main content area is titled "Vehicle History Report For Taxi Shuttle" for the date range "9/8/2009 - 9/8/2009". There is a "Print View" button. The report is for "Taxi Shuttle" on "9/8/2009 - Tuesday". The report table has the following columns: Start, Stop, Stop Location, Trip Length, Max Speed, Miles Driven, Idle Time, Stop Length, and Warnings. The data rows are as follows:
